Recommendation Letter

To the ACSAC Student Conferenceship Awards Committee,

It is my pleasure to recommend Yizhu Wen for the ACSAC Student Conferenceship Award. Yizhu is a PhD student in Computer Science at Indiana University Bloomington, where I serve as his advisor. He is currently conducting research in AI security. His work, "EchoGuard: Continuous Ultrasound-Based Human Presence Verification for AI Agent Detections," has been accepted to EdgeSP 2026 and has also been submitted to the ACSAC 2026 poster session as previously published work.

Yizhu would greatly benefit from attending ACSAC in person to present his research and engage with the security research community. This project represents his first research experience involving hardware-based sensing. In-person discussions with researchers who have expertise in hardware security and sensing would provide valuable feedback on both the technical design and broader research directions of the work. These interactions could also help him identify new research questions and opportunities for future work. At this stage of his academic development, participating in ACSAC would make a meaningful contribution to both his research progress and professional growth.

Yizhu has limited financial resources for conference travel. His current funding does not cover travel expenses, and our research group is unable to fully support student travel this year. As an international and first-generation college student, he also has limited access to additional financial support.

I strongly recommend Yizhu Wen for this award. The support would significantly enable his participation in ACSAC and contribute to his research and professional development.

Please feel free to contact me if any additional information is needed.

Sincerely,

INDIANA UNIVERSITY
BLOOMINGTON
